

Mihailo Cvetković

Backend / Python Developer (DevOps-focused)

mihailocvetkovic2@gmail.com · +381 64 093 3468 · Belgrade, Serbia · Open to Remote · github.com/mihailo50

PROFESSIONAL SUMMARY

Backend-focused Python developer who ships and operates production Django / Django REST Framework systems end-to-end — including a US-facing sports-betting platform spanning ~174 REST endpoints, real-time WebSockets, and a Dockerized CI/CD pipeline to AWS. Owns the full daily-coding and DevOps lifecycle: REST API design, PostgreSQL data modeling, Celery/Redis async processing, containerization, and automated deployment. A Cisco Cybersecurity Analyst and Ethical Hacking background brings a security-first mindset to every build.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Backend & APIs: Django, Django REST Framework (DRF), REST API design, WebSockets (Django Channels, Daphne/ASGI), Celery, Gunicorn, JWT & OAuth2 authentication, drf-spectacular / OpenAPI

Frontend: React, Next.js, SvelteKit, Tailwind CSS, Capacitor (mobile), Electron (desktop)

Databases & Caching: PostgreSQL, Redis, Supabase, vector search

DevOps & Cloud: Docker, Docker Compose, CI/CD (Bitbucket Pipelines, GitHub Actions), AWS (ECR, RDS, S3, Secrets Manager), Terraform (IaC), Heroku, Vercel, Caddy, Linux

Testing & Quality: Pytest, end-to-end testing, Ruff, Black, mypy, Bandit, Sentry monitoring

Security & Networking: Network security (firewalls, IDS), TCP/IP, VPN, DNS, Kali Linux, Metasploit, Wireshark, Nmap

EXPERIENCE

Freelance Backend / Full-Stack Developer — Independent Contractor (Remote)

Dec 2024 – Present

International clients · Python / Django REST Framework · DevOps

- Architected and shipped a production sports-picks platform (**ArenaSports**, arenasports.io) for a US client, as measured by **14 Django services holding ~148 data models and ~174 REST endpoints**, by rebuilding the backend from scratch on Django 6 with JWT/OAuth2 auth, real-time WebSockets, and OpenAPI documentation.
- Automated near-zero-downtime delivery for that platform, as measured by a containerized image published to **AWS ECR via a Bitbucket Pipelines CI/CD flow**, by authoring a multi-stage Dockerfile, Docker Compose (prod/test), a Caddy reverse proxy, and Sentry health monitoring.
- Engineered a real-time content-creator platform (**Anorate**, anorate.com), as measured by **~162 REST endpoints** across chat, moderation, payments, and notifications, by building Django Channels WebSocket services, Celery/Redis background jobs, and Google Cloud Storage media pipelines.
- Delivered a real-time auction/bidding marketplace, as measured by **~62 endpoints with live bid updates**, by implementing WebSocket bidding, Stripe payments, and Redis-backed concurrency control.
- Standardized a **10-backend freelance portfolio totaling 600+ data models and 600+ REST endpoints** (fintech FX ledger, events marketplace, media, stock-analysis, dating), as measured by repeatable delivery to Heroku/AWS, by templating reusable authentication, payments, and CI/CD patterns across repositories.

Technical Support Assistant — Phuket d.o.o., Belgrade

Aug 2024 – Mar 2025

IT support · networking · endpoint security

- Sustained on-demand IT availability across **300+ betting locations**, as measured by continuous uptime of per-site network racks (WLAN, dual switches, UPS, betting media devices), by remotely diagnosing and resolving hardware, network, and connectivity faults.
- Resolved **20–30 support tickets per shift**, as measured by ticketing-system throughput, by triaging hardware/software/LAN-WiFi issues and coordinating ISP escalations during outages.

- Safeguarded user access and endpoint security, as measured by managed domain and email account lifecycles across supported sites, by provisioning accounts, enforcing access rights, and remediating security issues such as unauthorized-access attempts.

Technical Support Specialist — IKEA, Belgrade

May 2022 – Aug 2024

Asset lifecycle · incident response · security compliance

- Administered **~1,000–1,500 IT assets** (workstations, mobile, peripherals), as measured by accurate full-lifecycle asset tracking across the warehouse, by owning inventory administration and device configuration within a 4-person on-site IT team.
- Maintained immediate on-site incident response, as measured by an average of **20–30 tickets resolved per team member per month**, by triaging on the floor and escalating only global issues to the central IT team for patching.
- Strengthened network-security compliance, as measured by adherence to internal security policies, by co-managing firewalls and intrusion-detection systems (IDS) and authoring procedural documentation that standardized support workflows.

SELECTED PROJECTS

Aether / Translatr — Real-Time Translation Workspace — aether-ashen-kappa.vercel.app/

Built a cross-platform real-time translation chat, by combining Next.js 16 / React 19 / TypeScript with OpenAI, an Electron desktop build, and Cloudflare R2 storage.

Smart Resume Builder & Job Matcher — smart-resume-builder-and-job-searcher-oxml93r2q.vercel.app/

Engineered an AI résumé and job-matching app, by pairing a Django + DRF backend with a Next.js frontend, OpenAI + LangChain, and vector search for job matching.

Kinetic AI Fitness — kinetic-ai-fitness.vercel.app/

Shipped a real-time AI fitness coach with webcam pose detection, by building a React 19 + Express + Supabase app with Docker and three GitHub Actions pipelines (CI, E2E, deploy) to Vercel.

AI Personalized Recipe Generator — ai-powered-personalized-recipe-generator-fr.vercel.app/

Developed a personalized recipe platform, by building a Django + Next.js monorepo with Supabase, OpenAI, GitHub Actions, and Terraform infrastructure-as-code.

CERTIFICATIONS

- Cisco Cybersecurity Analyst — 2023
- Ethical Hacking Certification
- Python Developer — IT Academy

EDUCATION

Python Developer Course — IT Academy, Belgrade

Nov 2020 – Aug 2021

High School Diploma, General — Vuk Karadžić, Ljubovija

Sep 2016 – May 2020

LANGUAGES

English (B2) · Serbian (Native) · Russian (B1)
